<u>LORMATION REPORT INFORMATION REPORT</u>

Sanitized Copy Approved for Release 2010/03/04: CIA-RDP80T00246A033100470001-2 25X1 1. The bauxite mine JUGO URALSKI BOKSITOVO RUDNIK and the bauxite mine MACHOVOY LOGARY. U.B.R. are located on the section of the line between ZLATOUST and UFA. A halt, KUKSCHNITZ, has been established right next to the mine so the raw bauxite can be skidded directly down in railroad cars. The deposits by KUKSCHNITZ gradually seem to be of less importance. In 1941 the mine MACHOVOJ LOG was opened 4-5 km northwest of KUKSCHNITZ. 25X1 2. mining was done from the surface and from up to 20 metres deep shafts. The deposits by MACHOVOJ LOG are very rich, and apparently there is ore for many years! The transportation of the ore from MACHOVOJ LOG to KUKSCHNITZ takes place in trucks. There was no kind of treatment or sorting of the ore before the transportation. daily production was estimated to be approximately 30 railroad cars, corresponding to 4-600 tons. The production material in the mines was old-fashioned; as such, the dumping cars were horse-25X1 Originally both mines got power from a small [power station. Later a large power station was built by MACHOVOJ LOCK which supplied both mines with power. This power station has perhaps also made it possible to have more modern technique in the mines. 3. plans to build an aluminum works by MACHOVOJ LOG(k) 25X1 4. Concerning the location of other aluminum works, 25X1 the bauxite was Approximately 3000 men are transported westwards towards UFA. working in MACHOVOJ LOG.(sic) 25X1 SECRET
